Air-cooled condensing units ECO-Design compliant

Frascold offers a wide range of commercial and industrial air-cooled condensing units for medium and low temperature applications. Their compact design is ideal for installations installation where need to cover small space and quiet operation is important.

The range of models has two main series:

- **EB models** for moderate climate areas, high efficiency unit with single-stage compressors
- **EBT models** for tropical climate areas, high efficiency unit with single-stage compressors

Both series are applied in many cooling installations, including applications like: cold and refrigerated rooms, supermarkets and shops, distribution centres, but also industrial applications, cooling processes in the food production and preservation industry.

Features

Reliable operation:

EB & EBT condensing units are rigorously assembled and tested in our factories in Italy. The Diagnose technology protection system, available for all Frascold compressors, enables early detection of faults and their quick resolution, thus reducing maintenance and system down time.

Efficiency:

EB & EBT condensing units have been designed to meet the ECODesign Directive 2009/125/EC and Regulation EU 2015/1095. The best efficiency of condensing units is reached thanks to the advanced design of Frascold semi-hermetic compressors and accurate sizing of all components.

Wide temperature range and universal use:

The range of units enables temperature control from 10°C to -45°C with all HCFC and HFC, HFO refrigerants.

Low noise:

Frascold compressors are distinguished by their particularly low noise level achieved through the intelligent combination of the monobloc structure with the mechanical components, the pipework, the compressor, high efficiency air-cooled condenser and the EC fan motors. This also enables unit installations very close to the utility provided by the application in order to reduce pressure drops and possible danger of leaks.

Compact and complete:

The compact size makes the condensing units a perfect solution for installations with small space available. The different versions proposed and the wide range of accessories make Frascold condensing units more efficient and reliable.

Easy to install and maintain:

As a result of their design structure, installation of the units is made simple. Accessibility to all components enables quick and safe maintenance operations.

Full assistance:

Frascold offers an accurate and comprehensive customer service and prompt assistance in any emergency, both directly and through an extensive network of service centres and partners all around the world.

Standard design specifications

The choice of all components is based on quality and safety, respect for the environment and social responsibility:

- Frascold semi-hermetic compressor with POE oil filling and suitable for inverter regulation.
- Air-cooled condenser with wide exchange surface and optimised circuiting to reduce pressure drops and refrigerant charge .
- EC fan motors with low power consumption and optimised airflow.
- Vertical-type liquid receiver with high storage capacity.
- Compressor discharge line with vibration absorber pipe.
- Electronic device for compressor protection.
- Support base frame designed to ensure the necessary strength and stability.

Configurations

The condensing units are available in different configurations to meet the installation requirements:

Standard

Basic configuration, including: Compressor, air-cooled condenser, fan motors, liquid receiver with shut-off valve, compressor discharge line and base frame.

Standard + Package

The basic configuration is also including: the liquid line (filter dryer, liquid sight glass and shut-off valve), high and low pressure switches, high-pressure switch for condensation control, electrical wiring box.

Accessories

Above mentioned configurations can be completed with other optionals (see page 13).

ASERCOM performance certifications

Frascold is a member of ASERCOM, the Association which ensures the accuracy and reliability of compressors and condensing units performance. ASERCOM has set out the procedure for measuring the performance and the certification process. The certification guarantees that the performance published corresponds to that actually measured with reference to European standard EN12900. The compressors and condensing units with certified performance are listed on ASERCOM's certified products list.

Performance data

Performance data of all condensing units are available through the FSS.3 Frascold selection software, download for free from website, easy to install and user friendly.

FSS.3 selection software can easily inform about the operating limits of the condensing unit, the cooling capacity and all operating data with any kind of refrigerant. The capacities are according to the European standard EN12900 at 50Hz operation. The capacity can also be calculated at 60 Hz.

With FSS.3 it is also possible to get technical information, drawings, manuals, bulletins and others.

FSS.3 Product Selection Software

Blue Is Better!

Conformity

The condensing units comply with the following Directives:

- Machinery directive 2006/42/EC
- Low voltage directive 2014/35/ECE
- Ecodesign directive 2009/125/EC
- Commission regulation EU 2015/1095

To verify compliance with Directive 2009/125/EC Ecodesign-Commission regulation EU 2015/1095, refer to the FTEC030 manual or use the FSS.3 selection program.

The condensing units are not functional assemblies, which means that in order to work they need to be integrated into a device or system. It is forbidden to commission the product before the device/system in which the cooling unit will be incorporated has been declared compliant with the provisions of the relevant directives, with particular reference to the directive regarding pressure equipment.

Models overview

Frascold offers a wide range of models and versions that allow to keep the right temperature and the perfect balance between refrigerant load and efficiency in every refrigeration process. The range of models has two main series:

- High efficiency models: EB for moderate climate areas with a single-stage compressor and EBT for tropical climate areas
- Standard models: LB for moderate climate areas with a single and two-stage compressor and LBT for tropical climate areas

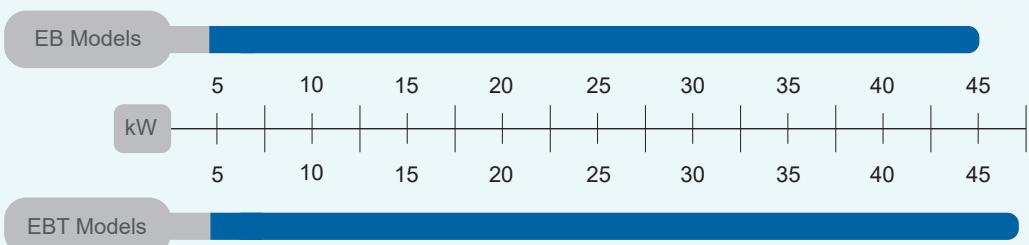

Current range:

2 versions, 58 models with compressors having displacements from 4 to 56 m³/h at 50Hz

Low Temperature

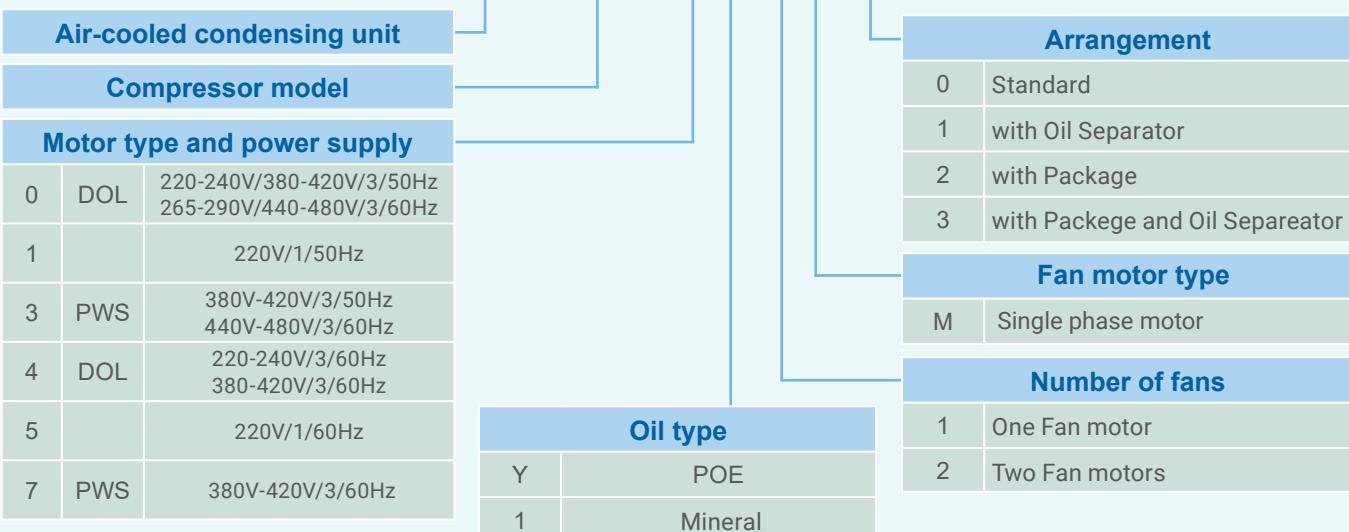

Medium Temperature

Model designation

EB - S1242 - 3 Y - 2 M - 0

Special features

Low noise: Frascold compressors are distinguished by their particularly low noise level achieved through the intelligent combination of a monobloc body structure with the mechanical components of gas compression and suction and the electric motor. This also enables unit installations that are very close to the utility provided by the application in order to reduce pressure drops and possible danger of leaks.

Reliable operation: Frascold condensing units are rigorously assembled and pressure tested in our factories. The Diagnose technology protection system installed on all Frascold compressors enables early detection of faults and their rapid resolution, thus reducing maintenance and system stoppage.

Easy to install and maintain: As a result of their design structure, installation of the units is made simple. Accessibility to all components enables quick and safe maintenance operations.

Full assistance: Frascold offers an accurate and comprehensive customer service and prompt assistance in any emergency, both directly and through an extensive network of service centres and partners distributed across all five continents.

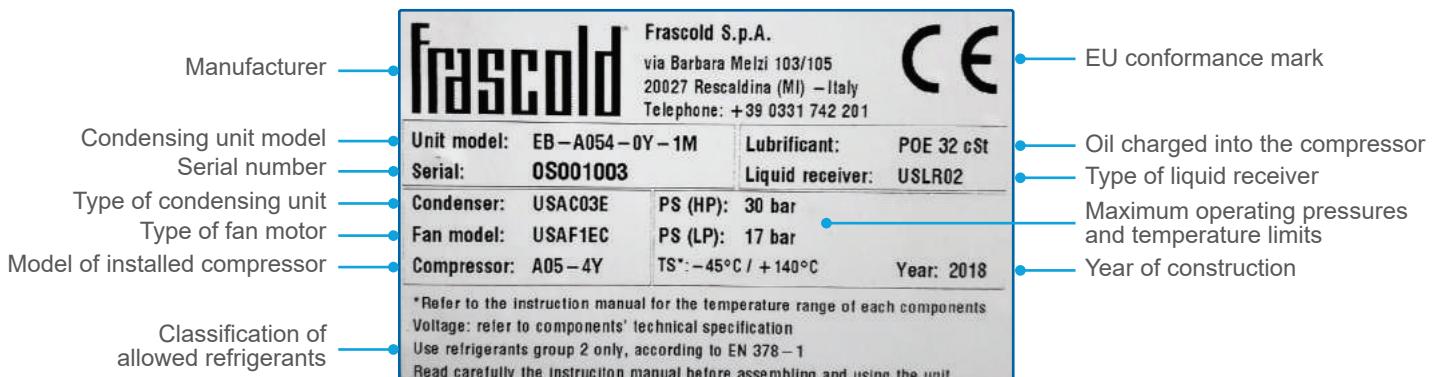

Compact and complete: Their compact size also makes them the perfect solution for installations with limited space. The different versions proposed and the wide range of accessories make Frascold condensing units more efficient and reliable.

Wide temperature range and universal use: The range of units enables temperature control from 10°C to -45°C. The units can be used with all HCFC and HFC, HFO refrigerants.

Reduced consumption: The efficiency of condensing units is due to the advanced design of Frascold semi-hermetic compressors and correct sizing of all components used in the units such as air-cooled condensers and EC fans.

Information plate

All the important information to identify the main components and operating limits are displayed on the unit name plate.

⁽¹¹⁾ Liquid receiver with safety valve

⁽¹²⁾ Max liquid refrigerant 90% of the volume. Liquid temperature 20°C

⁽¹³⁾ Valves with solder connections

⁽¹⁴⁾ Including service valves, oil charge, rubber supports; not including any accessories supplied on request

⁽¹⁵⁾ Optional component (see page 13)

Control and protection device

The compressor is equipped with the Kriwan INT69® Diagnose protection devices, a further development of the compressors protection capability.

The Diagnose technology is not limited to the protection of the compressor, it also provides specific functions of diagnostics aimed for:

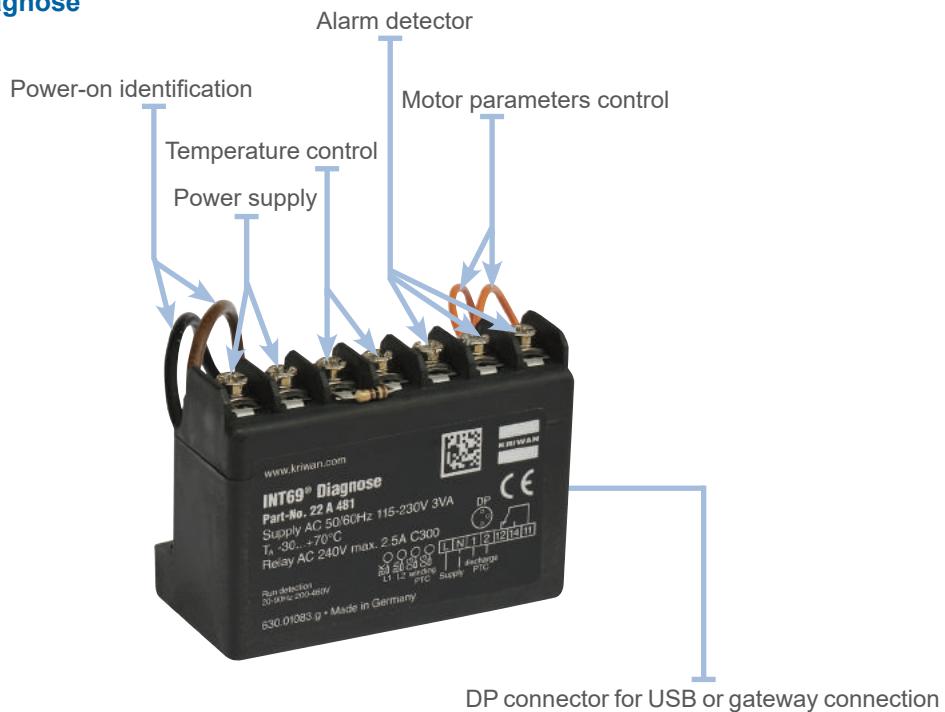

- preventing operating faults that may occur in the system through the historical data analysis,
- planning maintenance actions,
- adjusting parameters for system optimisation.

The additional protection capabilities help extending the service life of the compressor. Through this technology applied to the compressors, users benefit from the increased reliability of the refrigeration system and the reduced operating and maintenance cost.

Advantages

- Guarantee of optimal operation throughout the life cycle of the compressor
- Practical and with simple operation
- Immediate diagnosis and accurate problem-solving in case of error or failure
- Intelligent monitoring of the compressor operation
- Extends the service life of the refrigeration systems
- Improves the compressor protection
- Reduces operating and maintenance costs
- Automatically saves operational data and errors in a memory
- Technical sheet with retrieval of stored data
- Display of compressor status through flash LED code
- Data download through DP port connection
- Remote communication through Modbus-Gateway and LAN-Gateway protocol
- Also applicable to already installed compressors

INT69® Diagnose

INT69 ® Diagnose is intellectual property and trademarks ® of KRIWAN Industrie-Elektronik GmbH.

From 1936 to date, a long process involving the development, constant improvement and attention to the latest technology

A global leader in the industry for over 80 years, Frascold produces over 70,000 screw and reciprocating compressors a year. Our 53,000 m² factory outside of Milan, Italy houses our advanced engineering, manufacturing and testing facilities.

Frascold has subsidiaries in the United States, China and India, and partners in 86 countries. We are the second largest semi-hermetic compressor manufacturer in Europe, and the third largest in the world.

We are committed to our customers, our employees and our values of innovation, quality and service.

We are passionate about being the best, and strive to improve and refine whenever possible. Investing in ourselves and our partners has made us the world's premier compressor manufacturer.

Frascold products

Renowned worldwide for their high quality and used in commercial and industrial applications.

- Reciprocating compressors
- Screw compressors
- Condensing units

Applications

The products are used in many refrigeration sectors, relating to air conditioning, process chiller and heat pump; and they influence the daily lives of many people.

- Retail cooling systems
- Industrial refrigeration
- Transport refrigeration and marine cooling systems
- Environmental simulation chambers
- Air conditioning systems
- Liquid chillers
- Heat pumps
